

DEEPANATH J

deepanathjad27@gmail.com | 9445069147

Profile

B.Tech student specializing in Artificial Intelligence and Data Science with hands-on experience building production-ready automation systems, real-time monitoring tools, and AI-powered workflows. Proven ability to independently develop scalable backend systems, optimize media pipelines, and integrate AI models including Gemini and Whisper into practical applications. Experienced in full-stack deployment, workflow automation, analytics engineering, and handling high-value digital asset protection systems during industry internship experience.

Infinite Computer Solutions

Round 1: 33 Round 2: 7

EXPERIENCE

Data Analytics Intern, Divo (Warner Music Partner), Chennai

Feb 2026 to Present

Real-time Anti-Piracy Automation: Designed and implemented an automated monitoring and takedown ecosystem to detect and block unauthorized film asset leaks like Jananayagan, integrating detection pipelines with a centralized dashboard and alerting system for faster response.

- **Tech:** FastAPI, YouTube Partner API, Google Sheets, Google Apps Script (GAS), Telegram Bot API, Render VPS.

Instagram Business Intelligence: Built a scraping and lead-scoring pipeline to analyze engagement (plays, comments, follower growth) and prioritized outreach via automated Google Sheets workflows to streamline discovery and follow-up.

- **Tech:** Flask, Instaloader, Google Sheets, GAS, Render VPS.

Automated Subtitling : Prototyped speech-to-text tooling for regional language subtitling using Whisper and PyTorch; evaluated signal-to-noise and music interference issues and implemented preprocessing strategies to improve transcription quality.

Video Editing Tool :Engineered a custom media processing pipeline for large movie assets (10-20GB). Reduced processing time from nearly 3 hours to approximately 15 minutes using lossless stream-copying and hardware acceleration.

- **Tech:** Python, FFMPEG, NVIDIA NVENC, Subprocess.

PROJECT

OXYMORA - AI-Powered Plant Health Tool

Built an end-to-end plant disease detection platform using computer vision and generative AI. Integrated image processing workflows with Gemini-powered analysis for farming assistance.

Tech Stack: Flask, Gemini API, OpenCV, Render VPS.

VitalCare - Wearable Health Monitoring System

Designed a real-time wearable IoT health monitoring device for heart rate and movement tracking. Developed a live dashboard system with caretaker alert mechanisms.

Tech Stack: ESP32, Arduino, C++, IoT Sensors, Streamlit, ngrok.

EDUCATION

Prince Dr. K. Vasudevan College of Engineering and Technology, Chennai

B.Tech - Artificial Intelligence & Data Science, Sept 2023 to Jun 2027

- CGPA- 8.37

Himayam Metric Higher Secondary School, Chennai

HSC (Class XII), 2022

- 79.3%.

SKILLS

- | | | | |
|----------------------------|---------------|--------------|-----------------------|
| • Python | • HTML/CSS | • JavaScript | • MySQL |
| • Google Apps Script (GAS) | • Whisper AI | • Gemini API | • YouTube Partner API |
| • Youtube Data API | • Instaloader | • FFMPEG | • FastAPI |
| • Flask | • Git/GitHub | • Render VPS | • ngrok |
